And much more...

Ever since we launched Google Calendar, we've been listening to our users and working hard to make Google Calendar even better. Here are a few of the features we've added:

- **Stay on task with Google Calendar on your iPhone**

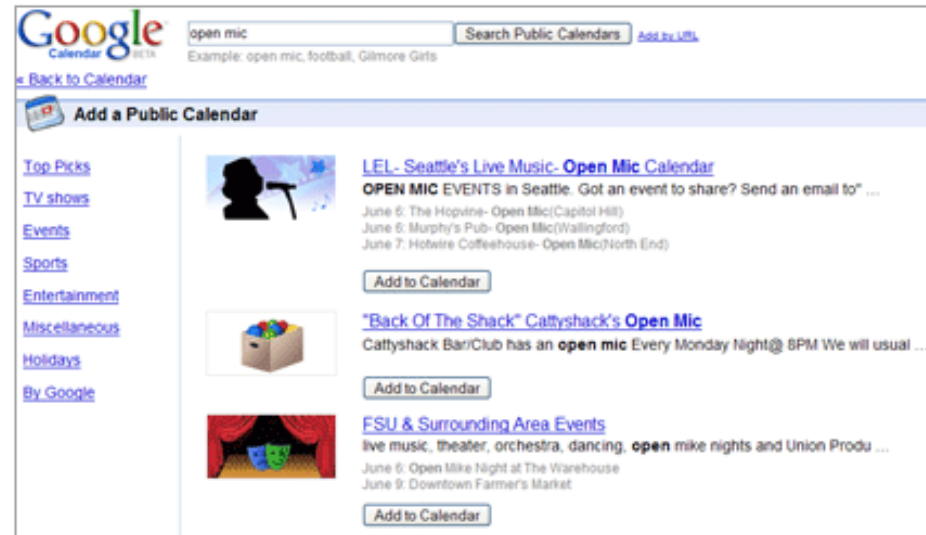

With an easy-to-read interface, Google Calendar now works (and looks) better on your iPhone. Enhanced 'touch-screen' buttons and color-coded events make keeping track of your schedule - and viewing others' calendars - even easier while you're on the go.

[Learn More](#)

- **Google Calendar gallery**

Many different organizations and individuals share their calendars publicly through Google Calendar. Now users can access any of these calendars through a easy-to-browse gallery. You can find all sorts of interesting calendars that let you keep track of your favorite basketball team's schedule, know when your favorite TV show is a repeat, or follow your favorite band's concert tour. Visit the [Google Calendar gallery](#) to see more.

- **Calendar on your Phone**

You can now access your Google Calendar account from your mobile phone! Just visit mobile.google.com/calendar/ with your

phone's web browser and once you're logged in, you'll see your list of upcoming events with date and time information in an easy-to-browse format.

- **Reminders from all your calendars**

You can now receive email or mobile text-message reminders for all your personal calendars. You can also set different types of reminders for each of your events. Google Calendar can notify you of upcoming events, new, changed and cancelled invitations, invitation replies or it can send you a daily agenda every morning. You do not have to worry about missing a thing.

- **Share calendars with friends**

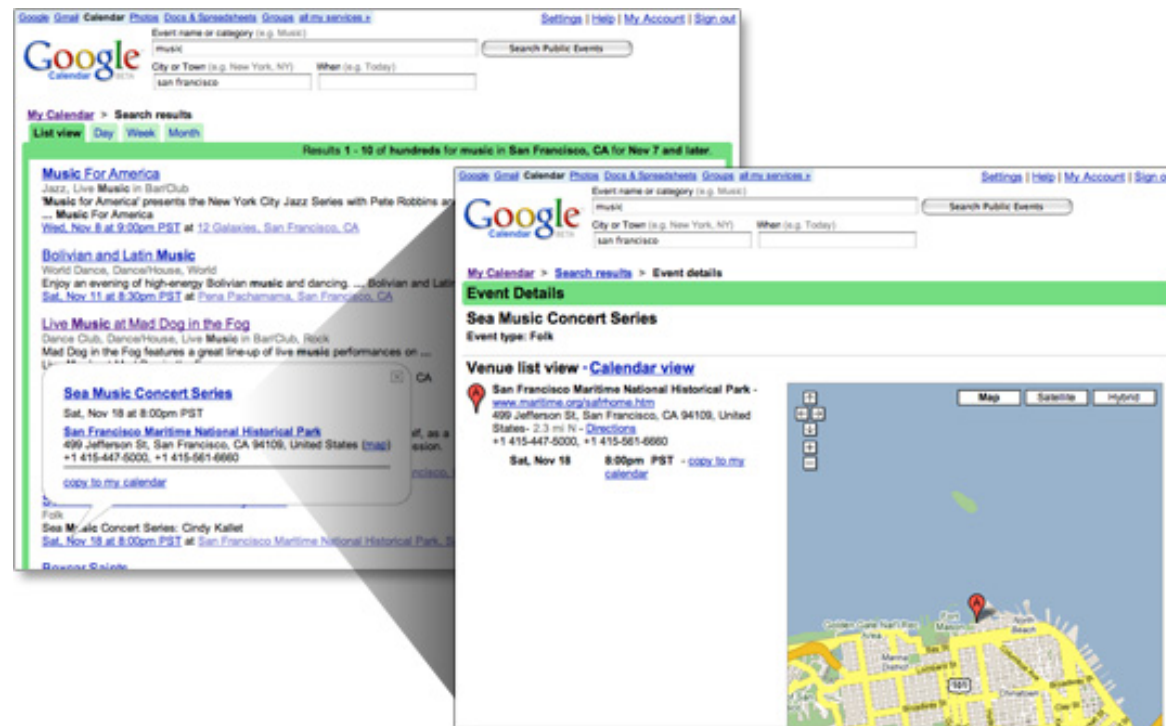

Found a public calendar of events that you would like to send to a group of friends? No problem. Simply click on the arrow next to the calendar, select "Send to a friend" and type in the email addresses of people with whom you would like to share it. Now, you can keep anyone up to date on upcoming events that you find on Google Calendar.

- **Your not-so-digital calendar**

We understand that not everyone has a PDA or wifi connection all the time. Some people like having a printed agenda. So, we have added some features to make it easier for you to have a physical copy of your calendar. You can change font size, orientation and choose color or black and white mode.

- **Search and Add Events from the Web**

Now you can search the web for events and add them directly to your Google Calendar. Within Google Calendar, type an event search into the search box like "Symphony in San Francisco" and click "Search Public Events". You'll see a list of events that you can easily add to your Google Calendar.

Simply click on an event listing and you'll be able to see a map of where the venue is located and the corresponding times at which the event occurs. To add to your calendar, click on the time of the event and

select "copy to my calendar".

- **Calendars with web content events and special icons**

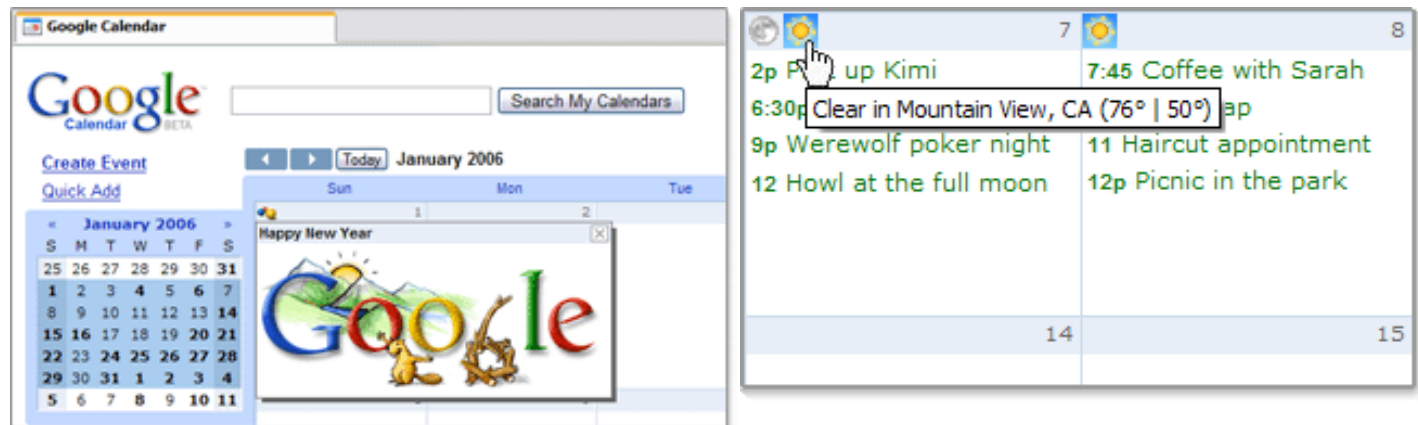

We've added a new calendar format with a little extra eye candy. These calendars have small icons at the top of the day when there's new information.

Using these calendars, you can now get some extra information directly in your calendar view — like the upcoming weather, the phases of the moon, and even a heads up when a new Google Doodle appears on [Google.com](http://www.google.com).

To get the weather forecast calendar for cities in the U.S., sign in to Google Calendar and click Settings to update your weather preferences.

To add the Google doodles calendar or the moon phases calendar, click the plus symbol (+) next to "Other Calendars" on the left side of your screen. Select the "Browse Calendars" tab and then look in the "Fun Calendars" area. When you find the calendar you want, just click the "Add Calendar" button.

If you're interested (and technically inclined) you can publish a calendar in the iCal format that takes advantage of this new format, or use the updated Google Calendar Data API to make calendars like this of your own. [Learn more](#)

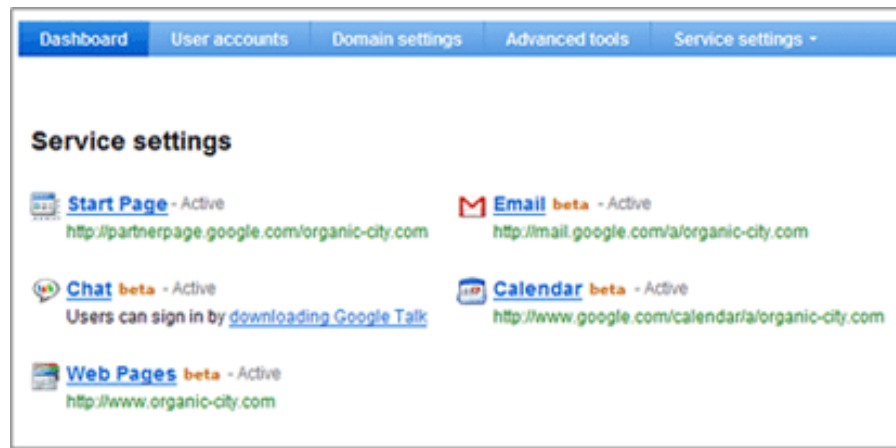

- **Google Calendar in 17 new languages**

We've heard from Google users all over the world who wanted Google Calendar in their own languages, so we've been working hard to make this happen. If one of these is your preferred language of choice, give the new interface a try: [French](#), [Italian](#), [German](#), [Spanish](#), [Chinese \(Simplified\)](#), [Chinese \(Traditional\)](#), [Japanese](#), [Korean](#), [Dutch](#), [Portuguese \(Brazilian\)](#), [Russian](#), [Norwegian](#), [Swedish](#), [Finnish](#), [Danish](#), [Polish](#), and [English \(UK\)](#).

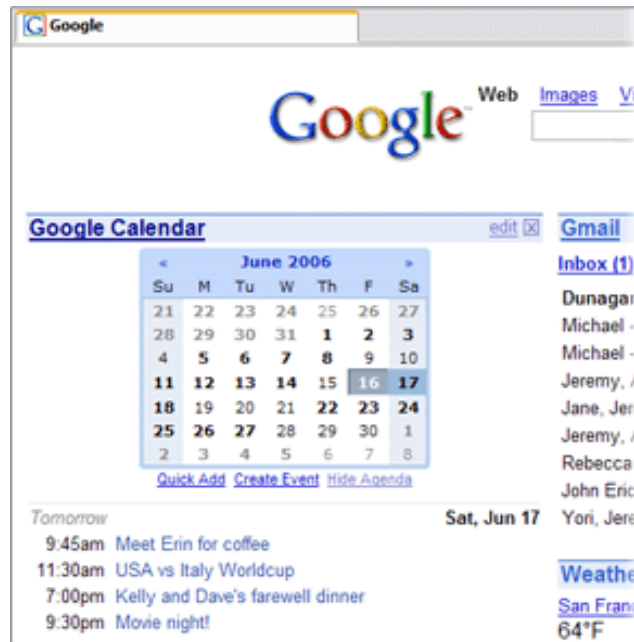

- **Interested in using Google Calendar at work or school?**

Now you can sign up for [Google Apps Team Edition](#) and use Google Calendar to create events and coordinate schedules with your colleagues and co-workers. By signing up, you can also use Google Docs and Google Talk within your school, business or organization.

- **Add your calendar to your Google Personalized Homepage**

Now you can add the Google Calendar Gadget to your Google Personalized Homepage so your calendar is always at your fingertips. This module lets you browse through your schedule and add new events, right from your Homepage. [Learn more](#)

- **Publish your calendar and share it with the world**

Have a website or a blog where you'd like to show other people what's going on? Now you can place an interactive, graphical version of your calendar into any page that you manage. The [Event Publisher Guide](#) shows you how, plus other ways to add Google Calendar information to your sites.

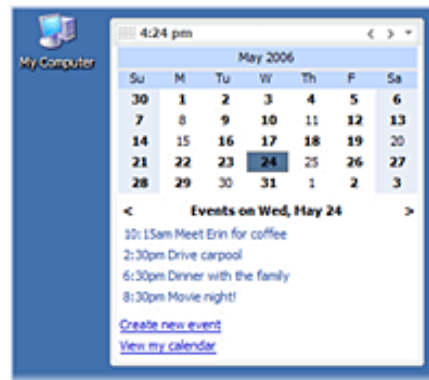

- **Access your calendar from your phone**

Now when you're on the go, you can access the events on your calendar (or even add new events) with your mobile phone. [Learn more](#)

- **View your calendar with Google Desktop**

The handy mini-calendar gadget for Google Desktop lets you view your agenda without even opening your browser. You can place the Google Calendar gadget right on your desktop or leave it docked in the Desktop Sidebar. [Learn more](#)

- **Support for Verizon**

Now you can get SMS notifications and send SMS calendar commands with your Verizon phone. Just go to the Notifications Settings page to select the kind of alerts you want and to verify your cell phone number. [Learn more](#)

- **Simple event and calendar publishing**

We've made it easier for you to add Google Calendar event reminder buttons to your web pages, so you can help visitors to your site quickly add individual events or a whole series of events to their calendars. [Learn more](#).

- **Google Calendar data API**

We launched the Google Calendar data API, which lets developers create services and applications that build on Google Calendar. This API lets your applications display and modify Google Calendar data. [Learn more](#)
